Carlsbad Alkaline Water was discovered in 1882 one block from the Pacific Ocean. This 9,500-year-aged pure living water comes from a 1,700 foot-deep aquifer that originates about 60 miles east in the mountains of the Cleveland National Forest and ultimately discharges deep at the bottom of the ocean off Carlsbad.

Nature enhances this water with a unique combination of minerals that make it pure, naturally high alkaline, and with electrolytes. Nothing is added to this delicious water, and an alkaline or ionizer machine is not used. Alkaline your body and mind!
